

AMENDMENTS TO THE SPECIFICATION

Please amend the specification by deleting the paragraph commencing on page 2 line 15.

Please amend the specification by replacing the paragraph commencing at page 3 line 4 as follows:

The central cross member 16 supports an upper bearing shaft 18 equipped with an hydraulic motor 19 for the rotation of the upper revolving table 20 carrying the riveting mechanisms which will be described later in details, while the bed 10 is fixed to the lower revolving shaft 22 put in motion by the relative hydraulic motor 24 and that supports the lower revolving table 26 carrying the upsetting mechanisms. Inside the lower revolving shaft a central upright 28, not shown, is coaxially arranged whereon the item to be riveted, in this case a flange F of cables reel, gets placed still. Four nails' magazines assembled in the crossed position are placed in the upper part of the riveter, and more precisely two opposite magazines 30 fixed to the shoulders 14 and another two opposite magazines 31 fixed on the higher part of the upper revolving table 20 which is equipped with holes 33 for the passage of the hoses 48 of nails feeding to the riveting mechanisms through the selecting device described hereinafter.
